Cement (low, medium & high viscosity)

Mixers

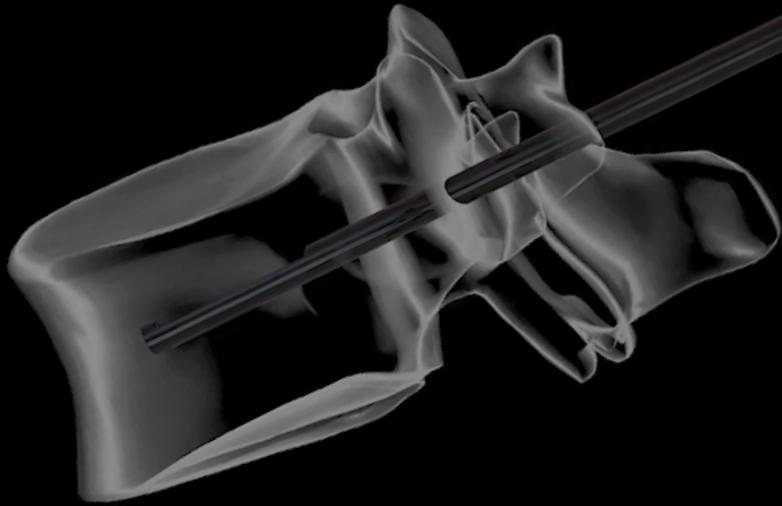

Injectors

TEKTONA[®] 2

VERTEBRAL FRACTURE REDUCTION SYSTEM

TARGETED TREATMENT

The lamella can be used in multiple directions to reconstruct the endplate.

CONTROLLED HEIGHT RESTORATION

The VFR instrument deploys the lamella step by step, enabling a progressive fracture reduction.

FULLY REPOSITIONABLE

The lamella can be deployed multiple times and repositioned as necessary.

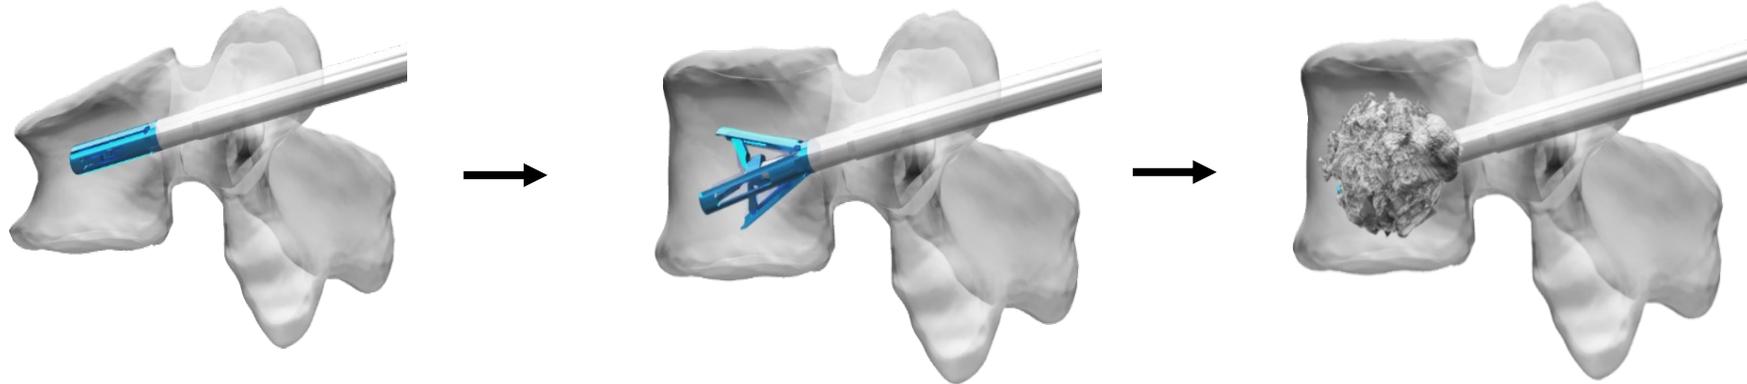

ONE OR TWO LEVELS

The treatment is suitable for one or two levels.

wittrom

Your Health Partner

- Anatomical height restoration and controllable implant deployment expansion are especially beneficial for wedge fractures in VCF.
- The three-dimensional expansion mechanism provides robust support.
- The three-dimensional expansion allows for an even distribution of bone cement, ensuring stable maintenance of the restoration.
